Road Assessment Programme Risk Rating

- Low risk (safest) roads
- Low-medium risk roads
- Medium risk roads
- Medium-high risk roads
- High risk roads
- Motorway & dual carriageway sections
- Single carriageway & mixed single & dual sections
- Motorway spurs & linking roads

© Road Safety Foundation. The Foundation is indebted to the Department for Transport, the Scottish Government and the National Assembly for Wales for allowing use of data in creating the map. Collision information is for 2004-2006, the most recent available when the map was prepared. Traffic data is for 2005 with local corrections where appropriate. The roads shown are based on the 2005 network but the map excludes the centres of major cities. For reasons of space, not all road numbers can be shown. No results are presented for roads shown in grey - these are either motorway spurs, connecting sections off the major route network, are short links, or roads that opened part way through the data period. Risk rates on road sections vary but it is expected that, on average, road sections off the major route network will have higher rates than sections on it. Generally motorways and high quality dual carriageway roads function in a similar way and are safer than single carriageway or mixed carriageway roads.
