

# Steel Lockers

## Changing Room Locker Colour Choices

---

Hard wearing and functional doesn't have to mean boring, a fact made clear with our standard range of metal lockers. With a huge range of colour combinations, style is not compromised for durability. All colours also contain bioshell anti-bacterial coating effective against COVID, making these lockers ideal for dry environments like hospitals, schools and offices.

Both the doors and body of these metal lockers are made from robust 0.9mm and 0.7mm thick steel, painted with a suede finish for a variety of long lasting colours.

With high security locks and an innovative solution to the gap between lockers, our selection of 13 standard and designer locker colours allow designers to have freedom in creating visually impressive, yet functional solutions.

---
