DOLPHIN TAP ACCESSORIES

› Every Electronic Dolphin Blue device (Tap, Shower Control or Flush Valve) requires a 'Power Source' to work. There is either a DB70 Plug-in Transformer or a DB82 PP3 9v Battery Box supplied complete with each device giving you one power source per device but it may be beneficial in certain applications to adopt fewer power sources; see below the options available:

› **The following three options of power source power only ONE device each – one of which is supplied with each device:**

DB70 9v 100mA Plug-in Transformer

DB82 PP3 9v Battery Box

DB83 9v Battery in IP67 Box

› **The following two options of power source power TWO or THREE devices each:**

DB75 9v Transformer in IP67 Box (requires wiring into mains)

DB85 9v 300mA Plug in Transformer

In order to power 2 or 3 devices the DB75 and DB85 options above must be used in conjunction with 2 or 3 way power splitters (ordered separately); we offer power splitters in 2 lengths - 100mm and 1500mm

› **The following option of power source powers up to TEN devices each:**

DB87 12V 4.6A Transformer Junction Box (requires wiring into mains)

The DB87 option is made to order – lead times apply further details here.

All of the power sources left are supplied with either a male or female connectors to correspond with the connector supplied with the Dolphin Blue device; the connector type needs specifying at order stage.
